# Christmas Workshop

## How does this work??

```html
<a href="https://google.com" target="_blank">Click here for a surprise!</a>
```

Explanation: This URL contains a link that redirects the user to Google when clicked. This can be used to trick users into visiting malicious websites or performing unintended actions.

Can also remove the target="_blank" to prevent the new tab from opening.

```html
<a href = "https://google.com">Click here for a surprise!</a>
```
